

KUMBA SISHEN MEGA PROJECT

Hatch South Africa's R2,5-billion part of the R8,462-billion Kumba Sishen South mega project sees the company responsible for EPCM on the plant and stockyard areas, including design, process development, full engineering, procurement, construction management, and project management.

Located near Postmasberg in the Northern Cape, the new project – which includes a crushing and sizing plant, stockpiles and a rail-truck loading station – is 80 km south of the principal Sishen Mine. The mine will produce 9-million tons of iron ore within months of completion, which is scheduled for H1 2012.
